

A positive, mechanical pipe-to basin seal for flat or curved surfaces.

Uniseals were designed for holding tanks but work well in any application where pipe penetrations are required. Proven applications include wastewater lift stations, valve boxes, sump risers, pumping stations, dispenser pans, junction boxes, cooling systems, and boats, to name a few.

Uniseals were designed for pipes with standard outside diameters (sch40). The tapered inner diameter forces the outer diameter to expand and securely seal the penetrating pipe or tubing without adhesive, hardware, or threads. Uniseals will seal to flat or curved surfaces even if the penetrating pipe is at an angle as great as 15 degrees.

Uniseals are made from Alcryn®, a tough, pliable thermoplastic developed by DuPont. Uniseals have excellent resistance to most chemical compounds, petroleum products, methanol, and most soil. (Alcryn® is trademark of E.I. DuPont Co., Inc.)
